telematics solution
on the market

Asset Tracking Solution

Secure your operations, reduce the risk of delays and loss of equipment by having it tracked and assigned to a specific vehicle. Prevent common mistakes, such as forgetting to bring crucial equipment to a site or leaving it there.

Using BLE Asset Tracking

With the AutoPi BLE asset tracking solution, you can handle and adjust your own equipment through your own server setup. Giving you full control over the system and how it should handle its data. The AutoPi device works as a gateway between the beacons and your software. The AutoPi Cloud can also be configured to be used as the management platform.

Easily control the status and current location of your assets remotely. Simply establish remote alerts to notify you when a vehicle enters or exit a geofenced zone with or without the assigned equipment. With a AutoPi BLE asset tracking solution, the driver will be notified of a missing object, and instantly react accordingly.

Control the Status of Your Assets

Convenient Usage

Your fleets can be easily managed through your computer, laptop, tablet and/or smartphone. With the help of the AutoPi Cloud, you can have the combined real time overview of your fleet with their current inventory lists.

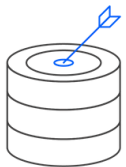

Benefits of Asset Tracking

Improved visibility of physical assets

Monitor and track your physical assets easily with a help of AutoPi Asset Tracking Solution.

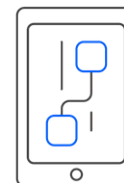

Improved data accuracy

Having accurate data is a necessary feature nowadays and a standard with AutoPi.

Reduced potential costs associated with theft and loss

Having accurate data is a necessary feature nowadays and a standard with AutoPi.

Reduced administration with a digital inventory system

The digital asset tracking system is simple and intuitive, which reduces the time of administration.
